- REDUCE INFLAMMATION
- DECREASE STIFFNESS
- IMPROVE MOBILITY
- REDUCE PAIN

PROUDLY CANADIAN 

Why Choose

TRI-ACTATM H.A.

Tri-Acta H.A. is designed to improve the viscosity of synovial fluid, ultimately enabling better performance. Horses with a moderate to heavy work load will benefit.

For new injury or in horses diagnosed with conditions that affect mobility or stride length. It offers the ability to train hard & return quickly to competition.

Horses receive only the required ingredients to help support good bone & joint health.

Veterinarians recommend our premium supplements with the confidence that they contain only active ingredients, without any fillers.

Identified as "Superior Quality Product"

An independent study was conducted and published in the Equine Veterinary Journal. Twenty three osteoarthritis supplements were purchased "off the shelf" and tested for their glucosamine levels, and then matched against their label claim. Integricare was congratulated for being one of only a few companies that actually met the stated ingredient level.

Belinda Trussell on Tri-Acta H.A.

"I have found Tri-Acta H.A. to be an outstanding joint supplement, effectively helping my horses to be the most supple and fluid they can be. I am such a believer in the product that I took it with me to Europe to feed to my horses while I was training for the Olympics."

Dosage / Ingredients

Product Information

Benefits

Dosages/Ingredients

Recommended Administration:

Using the measuring scoop provided, simply top dress feed with the desired amount.

Each serving (one level scoop) contains:

- Glucosamine 2500 mg
- Glucosamine Hydrochloride 2500 mg
- Chondroitin Sulfate 1250 mg
- MSM (Methylsulfonylmethane) 3750 mg

Recommended dosing:

Loading/Initial Dose
2 scoops daily for 5 days

Maintenance Dose
1 scoop daily

Directions

TRI-ACTA should be mixed with the horse's feed. Begin feeding at the loading dose for 5 days. Continue feeding at the maintenance dose thereafter. The time to achieve a positive response will vary depending on the severity of each condition. Continue feeding the loading dose for ten days, and then simply reduce to the maintenance dose. If improvement is not observed, the initial dose may be continued until the desired response is achieved, and then reduce to the ongoing maintenance dose. If you have any questions or concerns regarding the use of TRI-ACTA consult your veterinarian. Integricare follows GMP (Good Manufacturing Practices) standards. Certificates of analysis have consistently validated our requirements for quality. We are very proud of the fact that we use only high quality ingredients with no fillers. Our labels make it easy to validate the contents in each container of an Integricare product.

Supplied As

TRI-ACTA: Glucosamine, Chondroitin, MSM

- 1 kilogram (2.2 lbs) container (50 day supply for one horse)
- 3 kilogram (6.6 lbs) container (150 day supply for one horse)

Note: serving size and supply based on 20 cc scoop daily maintenance for average 1000 lb horse.

Benefits

Product Information Benefits Dosage/Ingredients

The benefits of oral glucosamine and chondroitin sulfate have been shown in many different types of animals, as well as in human studies, where joint health has improved.

Glucosamine, Chondroitin and MSM have the following benefits:

- Glucosamine is a fundamental building block necessary for the synthesis of key joint structures including cartilage and joint fluid
- Chondroitin stimulates the production of glycosaminoglycans (GAGs), a core component of cartilage
- Both glucosamine and chondroitin inhibit the degradation of proteoglycans, important in ongoing sound joint function
- In horses, the combination of the three has been found to be bioavailable, and is reported to have been safe in alleviating symptoms of degenerative joint disease
- MSM may be important in helping the body form a strong collagen matrix and is purported to help horses move more freely and easily, particularly in cases of soft tissue injury

Joint pain due to an imbalance in normal cartilage production is common. Wear and tear on joint structures cannot be avoided when dealing with an animal the size of the equine athlete. **As well, perfect conformation is not always seen, even in ideal breeding programs.** This may render some individuals subject to early joint degeneration and, therefore, pain. TRI-ACTA is an ideal supplement which can be used daily to proactively prevent these conditions or alleviate the pain associated with them.

The addition of TRI-ACTA to post surgical treatment can make the rehabilitation program far more comprehensive. TRI-ACTA will assist in the healing process, strengthening joint structures and improving the chances of a successful recuperation.

Integricare believes that TRI-ACTA has been optimally designed to increase mobility, minimize inflammation and improve joint condition. TRI-ACTA aims to help normalize cartilage metabolism, slow the breakdown of cartilage and potentially allow the cartilage to regenerate.

Product Information

Product Information	Benefits	Dosage/Ingredients
---------------------	----------	--------------------

Integricare has designed the TRI-ACTA combination to provide equine managers with a proactive strategy to assist in creating a healthy joint environment. Combining glucosamine and chondroitin in forms demonstrated to be active with MSM in the treatment of degenerative joint disease and various arthritic symptoms.

TRI-ACTA is a combination of Glucosamine, Chondroitin and MSM, when blended together, have a synergistic effect that enhances the synthesis of new cartilage, muscle tissue and ligaments. The synthesis of new cartilage treats the cartilage matrix at the cellular level, and allows the body to heal itself.

TRI-ACTA, a combination of the natural supplements Glucosamine, Chondroitin and MSM, is designed to:

- Promote healthy cartilage
- Increase joint lubrication
- Minimize inflammation

What are Glucosamine, Chondroitin and MSM?

Glucosamine:

Glucosamine is a component of the mucopolysaccharides that provides structure to the bone and cartilage as well as other tissues. Glucosamine is one of the biological chemicals that form the major cushioning ingredients of a joint's synovial fluid. When used as a dietary supplement, it is absorbed daily, lubricating and nourishing the cartilage cells and in turn producing more healthy cartilage cells.

Chondroitin Sulfate:

Chondroitin Sulfate consists of Glycosaminoglycans (GAGs), Glucuronic Acid and Galactosamine. The structure of the cartilage matrix allows Chondroitin to contribute to joint lubrication by helping to sweep nutrients into the cartilage. The arrangement of Chondroitin, along with collagen and water in the cartilage, enables the cartilage to provide a tough, wear-resistant, weight-bearing surface with shock absorbing effects. Chondroitin Sulfate may also have the ability to accelerate wound and ulcer healing, as well as promote cardiovascular health.

MSM (Methylsulfonylmethane):

MSM is a healthy and safe dietary supplement that provides sulfur, which is required to utilize vitamins and amino acids needed for healthy ligaments, tendons, heart valves and all connective tissue. MSM is also thought to relieve swelling, inflammation and pain.
